THE INDUSTRY LEADER IN TIP TECHNOLOGY

Airless spray tips are a key component to the successful operation of an airless spray system. They define the spray pattern, control the flow, atomize the coating and ultimately tell the pump how hard it must work. A proper understanding of airless tips is critical to the success of any airless application.

Tip Characteristics

It is important to remember that the orifice size, in conjunction with the fan-width, determines the spray characteristics of the tip.

Tip Wear

When beginning a project, choosing the right tip size and fan width will determine both coating consumption and production time. If the tip size is wrong – either by choice or through wear – mil thicknesses will be too heavy and the finish will be unprofessional.

The spray pattern chart demonstrates what happens as a tip wears. As wear occurs, the pattern size decreases and the orifice size increases. You will have to make more passes to cover the same area. There is no standard rate of tip wear due to the variation of the abrasiveness of all coatings.

Examples for Understanding Airless Tips

Example A:
The larger the orifice with the same fan width, the greater the volume of paint applied to the area.

Example B:
The larger the fan width with the same orifice means the same amount of material is being applied over a greater area. The result is less volume of paint per square cm.
