

TruSign uses a built-in radar to measure vehicle speeds. Speeds above a user-defined threshold are displayed, along with a range of pictograms and messages if required. Pictograms include warning signs for sharp bends, cross roads or roundabouts. Messages include warnings such as Slow Down or Too Fast. Tru-Sign can display the speed only, or the speed alternating with a message or pictogram.

All signs are delivered pre-configured to customer's requirements but can easily be re-programmed after installation using Bluetooth.

Data collection such as time, date, speed and direction of travel is standard on the TruSign 30CR colour display - over 220,000 events.

Speeds as low as 5mph can be measured for control of construction sites, car parks, fork lift truck loading bays and distribution depots.

Signs can be fixed or portable and mains, battery or solar powered.

TRUVELO

TruSign 30R/CR Speed Display Sign

- Digit height: 305mm
- Overall size: 620 x 620mm
- Weight: 4kg
- Visibility: 150 metres
- Amber only (30R) or red, yellow, green (30CR)
- Reflective white IP67 housing in ASA plastic or aluminium (CRa)
