Navigation

On-Board Weighing

➔ Provides protection

- Defence in the face of the general public's increasing claim mentality.
- Proof of service delivery.
- Protection for contractors and individuals against corporate manslaughter.
- Data stored within tracker until successful transmission.
- Roaming network coverage to provide ultimate live reporting.

➔ Ease of use

- Eliminates the need for paper records as data is stored securely online.
- Quick to read scheduled reports that provide detailed information including details of exception incidents.
- Developed by our users through user forums.
- Minimum maintenance and fully automated.

Our Sectors

Fleet Management

Agriculture

Winter Maintenance

Public Sector & Waste

Lone Workers

Gully Asset Management

Global Coverage

→ Frequency of GPS data points

- GPS points generated every 250 meters travelled and every 30° turn made by a vehicle.
- GPS points generated when a change occurs on the control box.
- All settings configurable to suit application.
- Change occurs on the vehicle control box or digital input from associated sensors.

→ Support and Maintenance

Exactrak has a dedicated in-house support team, pro-actively monitoring your vehicles daily.

Automatic emails notify any concerns where a tracker/asset has not reported in, or receiving attribute data.

Exactrak engineers are able to attend sites daily to identify and restore all issues, keeping downtime to a minimum.

→ Data Hosting & Security

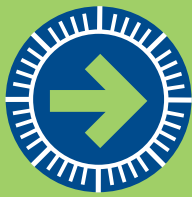

Performance, security and reliability is key to providing our customers with a dedicated service they can rely on. Data is kept and archived for over 21 years, being co-located in a secondary data centre, providing additional resilience.

→ Technical Systems Integration

With over 30 years' experience in vehicle tracking and GIS mapping, our in-house technical team can seamlessly integrate your requirements.

In conjunction with an appointed project manager we work closely to detail a specification through final implementation with an agreed timetable.
