

Discover the future of parking at Parkex 2023

Have you booked your ticket for [Parkex](#) yet? It's from 6th to 8th June this year alongside Traffex at the NEC.

A fresh new look at stand P121

RingGo has exhibited at Parkex for almost 20 years and we're pleased to feature prominently again this year. It's the first major outing for our new pink and purple branding. You can't miss our bold, bright stand, next to the Parkex Cafe.

The nationwide move to Open Market for parking

We believe in bringing choice to motorists, and so, we're standing out in more ways than one. With the [Open Market for parking](#) expanding nationwide, it's more important than ever for motorists to spot when their favourite service is available. And continue to choose the experience they prefer.

Why move to a different way of offering phone parking?

For Councils and Private Operators there are numerous benefits to the Open Market - enhanced service provision, reduced procurement, lower operating costs, greater uptake, happier motorists, not to mention, more resilient service.

Offering multiple phone parking solutions also increases digital uptake and reduces barriers to entry, helping new players enter the market, encouraging greater competition, innovation and customer satisfaction.

The National Parking Platform (NPP)

If you join the [National Parking Platform](#), you're also taking part in creating a nationwide infrastructure for parking payments - which, in future, aims to include wider transport and mobility offerings too.

The NPP is a Department for Transport funded programme which has been developed to drive innovation and wider uptake of digital services in the parking and transport arena. Future versions are likely to include micro mobility, green transport solutions and electric vehicle charging too.

Find out about the Future of Parking

There are so many benefits to the Open Market for parking. Why not come and [find out more](#) at **Stand P121**. We hope to see you there.
