

PRECISION ENGINEERED FABRICATION.

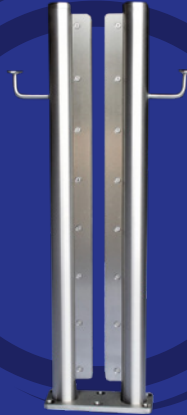

FABRICATING THE FUTURE

We can offer our customers a unique bespoke fabrication service. With extensive in-house production facilities and large stocks available, KGN Pillinger are able to meet the varied demands of any product requirement or construction project. Offering a supply or supply and installation service to our clients nationwide, we can look at your initial concept and enhance your design and manufacture your product to a high quality at a competitive cost.

- Offsite fabrication reduces transport costs and carbon footprint.
- Stocks of both 304 and 316L Stainless Steel as standard can reduce production lead times.
- Controlled environment for quality assurance, out performing any competitor.
- Fabrication of all KGN Products are quality controlled in our impeccable factory. Using professional, experienced engineers and fabricators.
- We continue to lead the way with acquisitions of state-of-the-art machinery and the development of stainless steel and aluminium fabrication services.
- Integrated solutions from design to installation.
- Increased longevity, technical superiority and competitive edge.
- In-house production eliminates third party supply and transport.
- Stainless steel, recognised as the preferred option for pipe networks.
- Stainless steel cladding, hand rails, balustrades, architectural work and more.
- One of the leading suppliers of Fabricated paddock equipment to the UK motorsport industry.

PRECISION

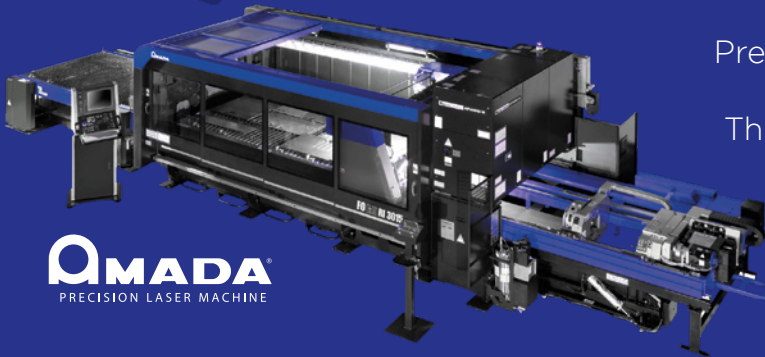

Using our Autocad and Inventor computer based drawing systems, our in-house draftsmen can provide a comprehensive range of drawing options including 3D modeling, CAD Visuals and Technical drawing visuals prior to fabrication.

Our T-Drill machinery collars steel tubing and forms flanges directly without the need for welding. The Rotary Index Laser Cutter automatically cuts stainless steel tube, angle, box section and plate to exact size. The HD Series Press Brake delivers 170 tonnes pressure to fold up to 3 m lengths of stainless steel plate.

The Orbimatic automated, orbital welder head is capable of welding 15mm – 100mm stainless steel pipe in a continuous process.

AMADA LASER

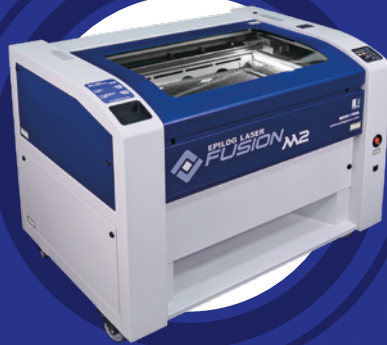

Presenting our flagship machine which is used to create many of our fabricated products. This machine is capable of reliably processing a large mix of materials with accuracy and efficiency. Sheet sizes of 3000mm x 1500mm up to 15mm thickness (stainless steel) and up to 8mm thickness (aluminium), can be processed via the laser's two automated loading beds.
