JADU GALAXIES

Build multiple sites from one centralised place

WHAT'S THE JADU GALAXIES MODULE?

With Jadu Central, you'll have access to the Jadu Galaxies module, which enables you to create, deploy and manage multiple sites from one centralised place. More than simply 'microsites', these Galaxies provide CMS solutions in their own right for use with full frontend websites.

Dedicated CMS interfaces for each deployed site can then be devolved to other parts of your organisation or network (department, service unit, community group, members, committees, tourism, schools, etc.) for ongoing management.

The Galaxies Core Themes use a theme implementation architecture, so you can develop Galaxies sites quickly using a standardised set of themes available from within the Jadu Central. Note these themes are only available to be applied to Jadu Galaxies sites and are different to Jadu Library Themes.

A Galaxies site module enables you to create, deploy and manage multiple sites (microsites) from one centralised place e.g. for events, venues or even your entire institution.

Jadu Galaxies provide you with the power to:

* Manage internet, intranet, extranets and portal sites from one location.

* Create web front-ends with a dedicated CMS while upholding standards-based, accessible CSS design.

* Choose a number of preset and simple Core Themes provided with Jadu Central.
