

Transform the way your organisation communicates with stakeholders

Video conferencing platforms struggle to properly integrate with in-room meetings. Our solution allows **all meetings** (in-person, fully remote or hybrid) to be captured, automating the in-room cameras and streaming directly to your website with all the participants clearly visible.

Capture any meeting

Keep an online record

We have many years' experience in helping non-technical clients to make their meetings accessible.

| How We Help

We provide everything needed to video capture any meeting

- We can **install** a fixed system on your premises, **integrate** with an existing Teams room or go **flexible** with our 4G-enabled portable StreamBox.
- Have full control over who has access to the stream either **live** or **recorded**.
- Generate an AI-driven **transcript** for a permanent, searchable record and easily produce meeting minutes and summaries.

Microsoft Teams and other meeting platforms have transformed business meetings. Our in-room video capture enables video conferencing to incorporate in-person meetings.

| Why It Matters

Building trust and engagement

- **Transparency** builds trust. Streaming meetings to your website shows **accountability** to shareholders, members, and the wider public.
- There is no better way to boost **engagement** and **knowledge sharing** across your organisation or to engage stakeholders in the decision-making process.
- And if you ever need to refer back to meetings then having a permanent written and **video record** ensures clarity over what has been agreed.

We have been making meetings better since 2000.
Visit our website to see how we can help you.
