

Accolade Measurement Ltd. is a specialist company delivering accurate and cost-effective solutions in static and dynamic load testing and instrumentation of bridges, building structures, vehicles and mechanisms

Specialist services include:

- Movement and strain monitoring
- Expertise for defects in bridges and building structures
- Structural health monitoring
- Remote condition monitoring and automated alerts
- Live displays, analysis, machine learning and manual data reviews
- Automated measurement and defect detection for energy, and manufacturing industries
- Dynamic load and performance measurement
- Proof load testing
- Supplementary load testing
- Floor load testing for buildings
- Barrier testing for handrails
- Strength testing and risk assessment for stadiums and sports grounds
- Lifting beam testing
- Fixings testing

Our work ranges from safety critical structural monitoring of large constructions to routine safety tests and includes the design of bespoke testing or remote condition monitoring solutions.

Accolade have over 30 years' expertise in successfully planning, managing and completing projects including for public and private sector clients, engineering consultants, contractors, and individuals. They provide services to multiple industries, including construction, transportation and energy sectors.
