

Micro Asphalt

Our 'KIELYpave' is a high quality micro asphalt which has been formulated in conjunction with one of the UK's leading bitumen suppliers with input from one of Europe's foremost specialists.

It is ideal for use where the existing surface is not suitable for surface dressing – because of extensive patching requirements, rutting, failed repairs or extensive utilities work.

It also provides an alternative where surface dressing would be considered unsuitable, such as in some populated urban areas.

It is a cold applied mix, using the latest continuous flow plant, in a two-layer process. The first application regulates the existing surface, filling depressions and rutting, and then a surface coat is applied to improve skid resistance.

It is both cost effective and pleasing on the eye, it reduces road noise and can rapidly transform a road with extensive patching and utilities reinstatements into one with minimum surface irregularities.
