

Road Markings

Kiely Bros strive to be recognised across the UK as the leading specialist surface treatments provider, with over sixty years' experience. Our objective is that our team will provide the most cost efficient, suitable carriageway solution, preserving your network for years to come. Investment into our lining division over the last couple of years has enabled us to offer our clients a complete suite of services, from one trusted partner ensuring planning and preparation works through to a finished, fully reinstated road.

Our objective is to become an integral part of the client's overall team, earning their trust through prompt, reliable delivery and using our decades of experience to assist through ECI (Early Contractor Involvement). ECI allows us to offer the client expert advice on design, methodology and material decision to ensure the best "whole life cost" with whatever budget is available.

Wherever possible, we are fully committed to improving our carbon footprint and driving our sustainability levels forward. Very recently we invested heavily in new plant and equipment, ensuring it is of the highest standard and as environmentally efficient as possible. Currently Euro 6 Vehicles make up 98% of our road marking fleet, with a rolling programme to reach 100% within 12 months. Our recent investment in newer, greener equipment is a clear demonstration of our efforts to achieve our goal of net zero by 2033.

In line with our exciting 2033 initiative, we are also investing in new products. Watch this space for more details...

We're NHSS7 certified as well as ISO 9001 and 14001 accredited and use HAPAS approved materials, so you can be sure you're dealing with the experts. We offer hydroblast removal of existing markings and a crack sealing and patching service. Next, an extensive charting process is used to mark where the lines, antiskid and potential cats-eyes should be laid.
