

# THE CELNOR GROUP

Celnor is a leading provider of regulatory assurance, specialising in testing, inspection, and compliance. The Group delivers essential data, consultancy, and insights to over 6,000 clients, helping protect people, property, and the environment. Founded in 2023 by Simon Parrington Group CEO, London-based Celnor has rapidly grown to a team of over 1,500 colleagues across the UK, EU, and US.

## Built Environment

- Geotechnical & geoenvironmental consulting
- Ecology and arboricultural surveying
- Site investigation contracting
- Soil testing and laboratory analysis
- Topographic, utility, land, and marine surveying
- Materials testing and laboratory analysis

## Safety & Compliance

- Environmental testing
- Asbestos consultancy and analysis
- Water compliance and hygiene
- Working at height compliance and training
- Environmental claims management
- Workplace health and safety compliance

## Analytical Sciences

- Contract research for animal and food safety
- Laboratory testing and consultancy for energy providers

## Risk Management

- Building surveying & consultancy
- Fire engineering
- Façade engineering
- Water quality consultancy & verification
- Expert workplace health and safety

# BUILT ENVIRONMENT

Our Built Environment Division delivers a wide range of design, planning, environmental consulting and contracting services to support sustainable construction, urban regeneration, utilities, infrastructure and development projects. Our teams include geotechnical and geoenvironmental consultants and engineers, landscape architects and urban designers, site investigation contracting experts, ecology, arboricultural and environmental scientists through to materials and soil testing technicians, supported by in-house laboratory analysis expertise.

- Planning & design including urban design, landscape planning and landscape architecture.
- Environmental consulting including ecology, arboriculture, BNG consultancy.
- Environmental impact assessment, invasive species, flood risk, green space and GIS analysis.
- Consulting for ground risk issues, geotechnical and geoenvironmental assessments, generic and quantitative risk assessments, CD622, remediation and earthworks design and monitoring.
- Ground and site investigation contracting for geotechnical and geoenvironmental requirements, soil vapour and gas surveys.
- Testing and inspection including UKAS accredited site materials testing and sampling and waste classification sampling.
- Certification including inhouse UKAS accredited laboratories for soils and waters.
- Measured surveys including underwater, marine, topographical, utility and building surveys using the latest technologies.
