Multi Agency Safeguarding Tracker

Securely share safeguarding data to prevent harm

Simple, clever software to help safeguarding professionals securely share headline data and make more informed safeguarding decisions

What is MAST?

MAST is a secure, cloud based, independent system that connects essential interaction data from various safeguarding partners into a single, searchable platform

MAST data feeds

Police

NHS

Council

Fire and rescue

Popular features

Get timely information

Automate daily data flows to ensure consistent and accurate safeguarding data processing

Proactively identify at risk people

Enable rapid data sharing to quickly assess and address safeguarding requirements

Know when to make timely interventions

Set alert criteria for automatic notifications when safeguarding interactions escalate, facilitating timely interventions

See recent history to easily understand context

Access and review up to 12 months of safeguarding interaction records to monitor and track activities

Let the data tell you what you need to know

We work with you to set up automated, secure transfer of data from your systems to ours

Join the dots with more data

Get a broader understanding of vulnerability using more information sources

Built in audit trails

Create comprehensive audit trails to maintain accountability and transparency in safeguarding operations
