krafton

krafton® profiles

ECI value € 0.09 per kilo

- ✓ Low maintenance
- ✓ Lightweight
- ✓ UV- and weather-resistant
- ✓ Non-magnetic
- ✓ Service life of at least 100 years
- ✓ Low installation costs
- ✓ European product
- ✓ High resistance to chemicals
- ✓ Suitable for many applications

Aquadome FRP profiles

krafton® profiles

MATERIALS	fibre-reinforced plastic
ECI VALUE	€ 0,09 per kilo
APPROVALS	

Materials

Our krafton® profiles are made of fibre reinforced plastic (FRP). FRP has exceptional properties: it does not rot, it is very light and, above all, it is easy to maintain. Due to its properties, the applications for FRP are endless. It is used to make door thresholds, sliding doors, fences, cooling towers, swimming pool decks, railings and stairs. As the material is lightweight, the transport and assembly materials required are minimal. A major advantage is that transport and installation produce less CO2 emissions than, for example, steel.

Environmentally friendly features

Just like our FRP bridge decking planks and FRP profiles, a krafton® complete FRP bridge also has a service life of at least 100 years. If the krafton® profile needs replacing, then we take it back, in accordance with our return guarantee. Returned profiles are reused elsewhere after being thoroughly treated. Parts that cannot be repaired will be 100% recycled.

Technical specifications

Our krafton® profiles are made of thermohardened materials. This results in both a low coefficient in terms of expansion and minimal deformation and creep compared to thermoplastics. In addition, krafton® profiles are UV-resistant.

Applications

Curious whether our krafton® profiles are applicable to your project? Feel free to contact us without obligation.

Cooling tower made of FRP profiles
